Professional Profile

A motivated and enthusiastic recent Master's in Technology specific in Software Engineering graduate from Federation University seeking a position as a Software Developer or a Web developer either frontend or a backend department where I can apply my knowledge and skill and get the chance to learn and grow. I have worked as a Business Analysts in the company called Builders Academy, but I have no relevant professional experience, i.e. as a Web/ Software Developer, so through this position I want to make a jump into the real-world Software industry and pursue my dream of being a programmer. I have done few projects while I was studying and also some self-practiced projects. I am a fluent English speaker with excellent problem-solving skills.

Skills

- Excellent in languages like HTML, CSS, JavaScript, NodeJS, Bootstrap and also have knowledge on JAVA
- Familiar with Designing web sites
- Trained as both frontend and backend developer
- Excellent coding skills
- Dedicated and logical problem-solving skills
- Learning ReactJS at the moment
- Efficient in 3 languages, i.e. Nepali, Hindi and English

Education

Professional Year Program   **Sep 2019 – Present**
Performance Education, Melbourne, Australia

Acharya institute of Graduate Studies, Bangalore, India

Certification

Web Development Boot Camp   **January – June 2020**
Udemy

Academic Projects

- ***Pharmacy Management System (using Visual Basic and MySql)***   **March 2015**

  Acharya institute of Graduate Studies, Bangalore, India

Objective: *The goal of the project was to develop an application for keeping data and stock transaction records of a Pharmacy/ Medical shop.*
Tools: *We used Visual Basic software to develop the application and for the Database we used MySQL.*
Duties: *It was a chosen topic and we did it on a pair, i.e. Me and my friend. My role was to develop the front part of the application and help to coordinate with the databases. Well, I was the leader of the project and my friend took in charge of documentations and testing parts.*
Outcome: *It took a month to complete and the outcome was really good as per the tutor. The application was able to store the name, expiry dates, manufacturing dates, price and could also calculate discounts and offers. We did many testings and ended up making a perfect application.*
Result: *we obtained 80 out of 100 scores and it is also called HD marks.*

- ***Online Mag(using HTML, CSS, JavaScript, PHP, MySQL)***   **October 2016**
  Acharya institute of Graduate Studies, Bangalore, India

Objective: *The goal of the project was to develop a Web application known as online magazine. It was pretty similar to Instagram.*
Tools: *We used HTML, CSS, JavaScript and PHP to develop the application and for the Database we used MySQL.*
Duties: *It was a chosen topic and we did it on a pair, i.e. Me and my friend. My role was to develop the front part of the application and help to coordinate with the databases. Well, I was the leader of the project and my friend took in charge of documentations and testing parts.*
Outcome: *It took a month to complete and the outcome was really good as per the tutor. The application was able to make a user account, ask for password while logging in, user could upload pictures and also write the caption on the below. We did many testings and ended up making a perfect application.*
Result: *we obtained 180 out of 200 scores, i.e. HD.*

- ***Delivery System (using WordPress, PHP, MySQL)*** **October 2019**
  Federation University, Melbourne, Australia

Objective: *The goal of the project was to develop a Web application known as "Deliver Anything". It was pretty similar to Courier System.*

Tools: *We used WordPress and PHP to develop the application and for the Database we used MySQL.*

Duties: *It was a chosen topic and we did it on a group. We were a total of 4 members. My role was to develop the front part of the application and help to coordinate with the databases. Also, I was responsible for designing the Posters and brochures for presenting the Application.*

Outcome: *It took a month to complete and the outcome was really good as per the tutor. The application was able to make a user account, ask for password while logging in. The user would have the luxury to choose the thing they want to deliver with the delivery address. The service charge would be decided according to the size of the to-be-delivered product. We also did put the google map on the web app by using the APIs and it was very accurate and smooth. We did many testings and ended up making a perfect application.*

Result: *We obtained Higher Distinction for the Project.*

- ***YelpCamp (using HTML, CSS, JavaScript, Node JavaScript, Express JS, MongoDB)***

Objective: *The goal of the project was to develop a Web Site for storing and displaying the Camping Sites.*

Tools: *I have used HTML, CSS, JAVASCRIPT for the Frontend and NodeJS on the backend to develop the Website and for the Database I have used Mongo Database.*

Duties: *This is my Solo Project. I studied an Online Course from Udemy called the Webdev Bootcamp, in which this was the Final project. Well, I have completed this project from Scratch and have deployed on the Heroku app.*

Outcome: *It took a month to complete this project and I am very optimistic about the outcome. I have learned many different skills and have implemented. The application was able to make a user account, ask for password while logging in. The user would have the luxury to upload the campsite they want to sell with some specific price per night, and every user could comment on the post posted on the site. I pushed the application to the internet using Heroku app.*

Result: It's a really fascinating application and further I have started to study React JS.
